                                The present sequence is a novel human cell surface receptor protein (C) (HCSRP) designated HCSRP-8. The nucleotide sequence was identified in Incyte Clone 312256 from the CDNA library LUNNOTO2, which was made from CC RNA isolated from lung tissue. A number of Incyte Clones were used to assemble the consensus sequence. BLAST analysis showed that the sequence is homologous to immuno-superfamily protein B12 g3779242. HCSRP and its antagonist are useful for preventing or treating disorders associated with decreased or increased expression or activity of HCSRP. Such CC disorders include cancers such as leukaemia and melanoma, immune CC disorders such as rheumatoid archritts, asthma and atherosclerosis, bacterial and parasitic infections and neuronal disorders such as CC akathesia, Alzheimer's disease, multiple sclerosis and epilepsy. CC polymucleotides encoding HSCRPs may be used as hybridisation probes to diagnose these conditions. Anti-HCSRP antibodies may be used as antagonists, as a targeting or delivery mechanism for bringing CC pharmaceutical agents into contact with cells or tissues expressing HCSRP and for diagnosis of HCSRP-related disorders. HCSRP and its catalytic or immunogenic fragments are useful for drug screening using libraries of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-NOV-1998;

cc cell addesion molecule, LDCAM. It is found on lymphoid derived dendritic cc cells and displays homology to adhesion molecules, B7-11 and cytoplasmic cregion of B7-11. Human LDCAM is expressed in breast, retina, foetal cliver, spleen and heart, lung, muscle, placenta, thyroid and lung carcinoma. LDCAM polypeptides interacts with T cell surface molecules to carcinoma. LDCAM polypeptides interacts with T cell surface molecules to carcinoma. LDCAM polypeptides interacts with T cell surface molecules to carcinoma. LDCAM binding protein and increases natural killer (NK) cc and B7-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and cas quality control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, clisammation, autoimmune disorders, viral infected cells, infectious clisamention or reducing the effect of organ and bone marrow transplant rejection and for modulating T cell immune responses. LDCAM polypeptides may also be used as carriers for delivering agents attached to T cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
```

The invention relates to an isolated polynucleotide (I) comprising one 245 sequences (ABQ93288-ABQ93532). Treating a condition comprising administering to a mammalian subject a composition comprising the prote (II) encoded by (I) (ABF62809-ABP63053) or an antibody (III) to (II). (II) and (III) are useful for diagnostic evaluation of disorders. (I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healiand tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral

he protein (II).

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the expression of a polynucleotide sequence which is differentially cexpressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic construction cinjury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human procein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed construction specification, but was obtained in electronic form directly from WIPO at fig. wipo.int/pub/published_pct_sequences.

The nucleic acid is useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer, liver disorders such as hepatitis or neural disorders such as Alzheimer's disease. The present sequence represents the property of the present sequence of a novel human secreted protein associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid molecule, useful for preparing preventing, treating or ameliorating a medical cliver disorders or neural disorders.

cc modulating agent, by contacting an assay system computating appurising a purified HM cc polypeptide (human orthologue of genes that modify the p53 pathway in cc prosphila) or nuclaic acid with a test agent under conditions, where but for the presence of the test agent, the system provides a reference cc activity, and detecting a test agent biased activity of the assay system. CC Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator ct hat specifically binds to a HM polypeptide comprising an HM amino acid comparising contacting the patient (comprising contacting the cell with a patient (comprising contacting the cell with a patient (comprising contacting the cell with a p53 pathway cf a disease in a patient (comprising; (a) obtaining a biological sample cf rum the patient; (b) contacting the sample with a probe for HM contacting the comparising in a control; and (d) determining contentified by (M1) are useful hood disease). (M1) is useful condentified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, such as angiogenesis, apoptotic or cell proliferation of the cell, so that the cell with sequences (condentified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic or cell contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in a variety of diagnostic and contified by (M1) are useful in the cell contified and contified by (M
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    05-JUN-2001;

Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53 pathway in Drosophila.

Example 2; Page 557-559; 678pp; English

The invention relates to identifying (MI) a candidate p53 pathway combating agent, by contacting an assay system comprising a purified HM copolypeptide (human orthologue of genes that modify the p53 pathway in cosophila) or nucleic acid with a test agent under conditions, where but for the presence of the test agent, the system provides a reference cactivity, and detecting a test agent, the system provides a reference cactivity, and detecting a test agent with a candidate modulator contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising an HM amino acid contacting a specifically binds to a HM polypeptide comprising (M3) a p53 pathway of a disease in a patient (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising contacting the sample with a probe for HM comparison indicates a likelihood disease). (M1) is useful for identifying modulators of the p53 pathway. A probe for HM expression is useful for identified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell proliferation of the cell, so that the cell undergoes normal (M2) and (M3) are useful for treating defects in the p53 pathway of a cell, thus restoring cells proposed to cell proliferation disorders. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claimed are a vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comparising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a compound that is differentially expressed in neuronal tissue of a first animal compound that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of the polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound or small molecule that regulates the extivity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a contivity in an animal of one or more of the polypoptides given in the computed for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more or more of polypoptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene conjury in a pain animal (e.g. gene conjury conjuration) which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed confuring to the printed confuring pain. Note: the sequence data for this patent did not form part of the printed confuring pain. State of the printed confuring pain with the specification, but was obtained in electronic form directly from wipo at the printed confuring pain and confuring pain.

The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes are

The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant recording interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources
